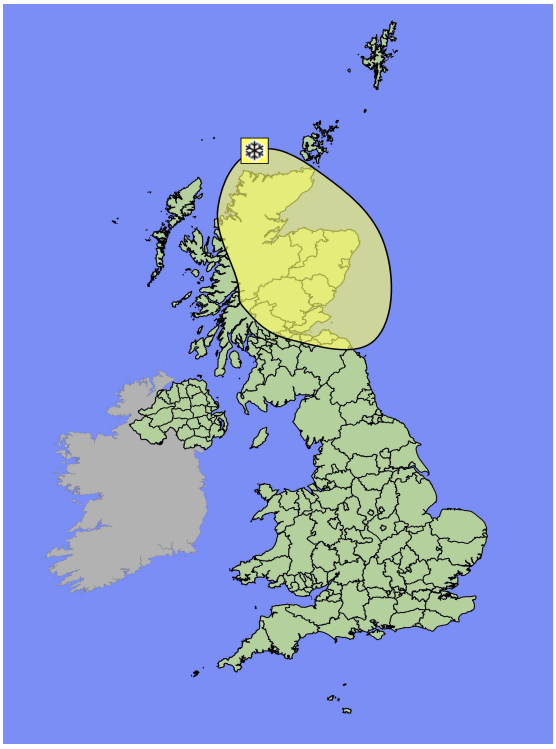
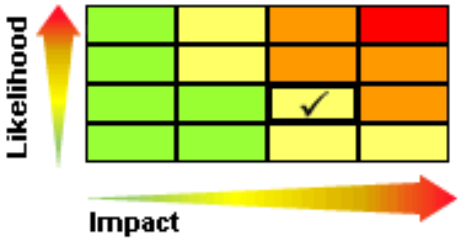
National Severe Weather Warning Service





Chief Forecasters Assessment
A waving cold front over northern Scotland will become more active through Monday, and with air of arctic origin pushing southwards into its rear, rain is expected increasingly to turn to snow, though at this stage there is some uncertainty about both timing and intensity of the system. With a lot heat input into roads over the last couple of weeks, it is not clear how readily snow will settle on paved surfaces, though snow will settle easily on vegetated surfaces.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **12:00 on Mon, 02nd Apr 2012** until **06:00 on Tue, 03rd Apr 2012**

Rain on Monday morning will turn increasingly to snow from the north through the day and into the night, giving accumulations of 5-10 cm in places, especially on hills, though only 2 to 5 cm at lower levels, and only patchy cover near coasts. As the snow clears south during Tuesday morning, roads are likely to turn icy. The public are advised to be aware of the risk of disruption to transport.
